

Beaumont Hospital goes thin client with Business Intelligence Solution based on Linux

Beaumont Hospital has entered a strategic alliance with **Manitex** for the expansion of their existing **DI-Atlantis Business Intelligence Solution** into thin client processing. This will see them increase the availability of the solution to many more users either with Windows or Browser interfaces running in thin client fashion across the Hospitals Intranet. The migration includes the installation of the DI-Atlantis server components on one of the Hospitals Linux servers.

Beaumont Hospital has utilised the DI Atlantis Solution for over 4 years to provide summarised values of activity on financial and patient information within the Hospital. It is the only management information tool in general use in the Hospital and is used in the following areas:

- ▼ General Management Information
- ▼ Laboratory
- ▼ Radiology
- ▼ Finance
- ▼ Theatre
- ▼ Waiting Lists
- ▼ Accident & Emergency
- ▼ Patient Services

IT manager **Tony Kenny** stated that 'The utilisation of these modern business intelligence tools has helped us begin to tie together the available information sources in an attractive package for our users. The tool is simple to use but very powerful'.

Expansion Plans – The following facilities will be introduced in line with the expansion of the Hospitals Intranet:

- ▼ Broader access to management information by many users via a standard Browser
- ▼ Integrated views of information across various disciplines in the Hospital
- ▼ Better information to support Doctors and Clinical requirements.
- ▼ Monitoring hospital activity and key performance indicators
- ▼ Ability to easily share appropriate information with other Hospitals and Health agencies.

About Manitex:

Manitex is a 'solutions' focused supplier of Information Technology products and services to the Health market. We offer a range of Services, Productivity Tools, advanced Technologies and niche Products that will enable our customers to modernise their Information Systems architecture, while maximising their current and future IT investments.
