

Manitex joins Top Doctors Group to strengthen digital healthcare capability in Ireland

For more than 25 years, Manitex has worked alongside healthcare providers across Ireland, delivering specialist clinical systems and trusted digital infrastructure in key areas of hospital care.

Today, Manitex is part of Top Doctors Group, an international health technology company focused on supporting the digitalisation of healthcare, improving patient access and helping healthcare organisations use data, technology and patient insight to improve services.

Founded in 2013, Top Doctors Group has developed an international healthcare ecosystem that supports both providers and patients. Its technologies combine AI, data science, clinical workflow tools and patient-facing platforms to help medical practices, hospitals, laboratories and healthcare organisations improve care delivery, optimise operational processes and strengthen patient engagement.

Top Doctors Group has established itself as one of the most trusted online medical platforms across Spain, Italy, the UK, Mexico, Colombia, Chile and Argentina. Its specialist selection platform helps patients identify and connect with leading private healthcare specialists, while www.topdoctors.com manages more than 3.3 million medical appointments with over 90,000 specialists and 2,500 leading clinics worldwide. Across its international markets the group has established itself as one of the most trusted online medical platforms with more than 18 million reviews, 80 million website visits and 170 million YouTube views.

The group will formally launch in Ireland at the Future Health Summit in Dublin, where it will introduce its wider digital health offering to Irish healthcare leaders, providers and stakeholders. For the Irish market, this marks an important step. Manitex brings deep local knowledge, long-standing healthcare relationships and practical experience supporting Irish healthcare providers. As part of Top Doctors Group, that foundation is now supported by the scale, investment and international expertise of a wider healthtech group.

The timing is important. Hospitals and healthcare organisations are under increasing pressure to modernise services, reduce operational burden, improve access, make better use of clinical data and create a more connected patient experience. Top Doctors Group brings together complementary capabilities that can support that transformation.

The group's offering includes:

A trusted digital platform that helps patients identify and connect with leading medical specialists.

A patient experience and feedback platform supporting PREMs, PROMs, benchmarking, service improvement and patient voice programmes

Digital health technology, clinical systems, interoperability solutions and data platforms designed to support more efficient, connected and intelligent healthcare delivery.

Together, these capabilities strengthen Manitex's ability to support healthcare organisations in Ireland as they prepare for the next stage of digital transformation. For existing Manitex clients, the priority remains continuity, trust and service excellence. The same local knowledge and sector experience that have supported Irish healthcare providers for more than two decades will now be backed by the scale, innovation and international expertise of Top Doctors Group.
