

Improved Performance Through Better Information Delivery

The Diver Solution: An All-Inclusive, End-to-End Business Intelligence Platform

Dimensional Insight provides data discovery and information delivery that improves performance by supporting cost effective, data driven decision-making. Our flagship product, The Diver Solution[®] (Diver), is an end-to-end business intelligence (BI) platform that includes rich data visualization, powerful data integration capabilities, and an array of data access options capable of satisfying the needs of every enterprise user.

Time-Critical Data Integration In One View

No matter where your data resides, Diver's data discovery tools integrate your disparate sources and transforms them into a data Model. With Diver's multidimensional model methodology, the information has already been processed, summarized and optimized for analysis and reporting, so responses are rapidly returned. This unique approach eliminates data hierarchies and other navigational constraints present within competing BI solutions. This methodology does not require the additional expense of creating a data warehouse or the licensing overhead associated with an underlying database.

Data is extracted from EHR, financial and operational source systems, integrated and delivered to users for easy, secure, role-based access to metrics.

Rapid Time-To-Value

Our technology provides organizations with a flexible approach for deploying dashboards and web-based report views. Users have the ability to view information at a summary level and then to 'dive' directly into more detailed views to understand root cause — all without IT intervention. Rapid information access empowers users with the answers to their questions, speeding the decision-making process.

Diver is a complete business intelligence platform. Every implementation includes the installation of all back-end server and production components. There are no hidden costs or expensive third-party tools required to deploy additional features. Users access data through a number of interface options depending on their specific information viewing and analysis needs.

BI That's Powerful And Complete

Data-Driven Decision-Making

Reduce time-to-information, automate the report generation process and establish a culture around data-driven decision-making that positively impacts performance. With Diver, users are given greater visibility into their data, with a software solution designed for viewing, analyzing and sharing information.

Powerful Data Integration

Gaining actionable intelligence requires a systematic approach to extracting, consolidating and converting data into a streamlined format suitable for delivery to users. Diver automates the data extraction and transformation process – data is collected from disparate sources, business rules are applied, and the information is fed directly to the application's presentation layer for use in dashboards and reports.

Interactive Dashboards & Scorecards

Providing users with secure, role-based intelligence is essential to data-driven decisionmaking. Diver simplifies the information delivery process, ensuring users are given timely access to business-critical metrics in a format that is meaningful to their specific role, while acting as a reliable, centralized information access point.

Ad Hoc Analysis & Self Service Reporting

Having access to a reporting environment is valuable only if users can easily answer their own questions of the data as they arise. Diver includes interactive reporting and analysis functionality that allows users to filter and access additional layers of detail directly no additional report requests are needed. Diver allows users to 'dive' in any direction they wish without the limitations of preset "drill paths" or hierarchical constraints. Diving is a simple point-and-click operation: No SQL queries, scripting or programming are required to explore and analyze your data.

Alerts & Information Broadcasting

Information overload is a real concern, especially when new transactions are logged on a minute-by-minute basis. Intelligence thresholds are predefined based on your business rules. When threshold ranges are violated, notifications are automatically pushed out to the appropriate stakeholders.

Support Decision-Making With Rich Data Visualization Capabilities

Provide users with the ability to easily identify trends and exceptions within the data by utilizing enhanced data visualization features. Data can be presented to users in a number of ways – interactive maps, indicators, bullet charts, trend lines and gauges – ensuring users are able to see the information in a context that is meaningful to them.

Make Information Actionable By Supporting User-Driven Analysis

Decision making is often hindered by the time lag that exists between identifying a metric that requires action and investigating the underlying detail. Diver users can seamlessly navigate from a high level dashboard view to the detail without requiring IT support.

Diver includes mobile BI capabilities empowering your knowledge workers with anytime, anywhere access to business critical information.

About Dimensional Insight

Dimensional Insight, Inc. is a leading provider of BI solutions with our BI platform and family of purpose-built applications. Our data integration, modeling, reporting capabilities, analytics, portals, dashboards, and applications empower users throughout the enterprise to make timely, data-driven decisions. Thousands of worldwide customers choose Dimensional Insight solutions for flexibility, ease of integration, and rapid time-to-value. Dimensional Insight consistently ranks as a top performing BI vendor in customer satisfaction.
