

New Endoscopy Clinical Information System for Bon Secours Hospital Dublin

The Bon Secours Hospital in Dublin is the latest hospital to implement the **EndoRAAD** Clinical Information System from Manitex. The facility's Endoscopy Department can now provide a more comprehensive service by instantly creating the patient's Endoscopy Report and recalling the patients' medical history from any PC.

"The implementation of a state-of-the-art Endoscopy Reporting System and engagement with the National QA Programme is a very exciting development for the Endoscopy Unit in Bon Secours Dublin," said Consultant Gastroenterologist **Prof Stephen Patchett**.

EndoRAAD stores a complete long-term history of examinations that can be easily recalled. This includes pictures, video and a PDF version of patients' report. Thanks to **EndoRAAD** from Manitex, the hospital is now able to rapidly produce detailed diagnostic reports that allow for more efficient follow-up treatment. This is good news for Bon Secours Hospital Dublin as the facility is one of the largest and busiest private Endoscopy units in Ireland. Currently the hospital carries out more than 10,000 procedures a year. **EndoRAAD** is already helping the facility deliver more responsive treatment.

"Before and After"

The **EndoRAAD** Reporting System also provides all users the ability to easily input, review and extract information. This not only saves staff hours searching through records, but also makes the information easily available at any PC terminal within the hospital.

This means that patients' reports can now reach the recovery area even before the patient does. The efficiency and ease of access to such detailed information has made **EndoRAAD** the tool of choice for any Endoscopy Department.

"The introduction of a computerised reporting system for Endoscopy has revolutionized our practice in how we manage, retrieve and process patient information. Within a few clicks we can determine what patient procedures were done, evaluate the results and ensure continuation of the post procedure care process. The move away from manually intensive paper based systems is the future for health care" said Endoscopy Unit **CNM Richard Marshall**

The Bon Secours Hospital will be the first private hospital to fully engage with the National Quality Assurance Programme in GI Endoscopy, so it's no surprise that **EndoRAAD's** Reporting System from Manitex was the obvious choice.

The Bon Secours Hospital Dublin provides a complete range of high quality diagnostic and therapeutic endoscopic procedures. The unit includes three procedure rooms and 27 recovery beds. There are a total of 24 expert consultants including Gastroenterologist, Respiratory Physicians, General Surgeons and Urologist who carry out procedures in the Unit.

*Other hospitals that have implemented the **EndoRAAD** Clinical Information System from Manitex include St. Vincent's University Hospital, Beaumont Hospital, Mercy University Hospital Cork and the Mater Misericordiae University Hospital. EndoRAAD was chosen as a national solution by the Health Service Executive and is now implemented in over 20 hospitals in Ireland.*

EndoRAAD is a product of CompuGroup Medical and Manitex

About Manitex:

Manitex is a 'solutions' focused supplier of Information Technology products and services to the Health market. We offer a range of Services, advanced Technologies and industry strength Applications that will enable our customers to modernise their Information Systems architecture, while maximising their current and future IT investments. **We specialise in delivering practical solutions to meet the real requirements of today in the Health market.**
